Even if I would like to acknowledge the many people who have patiently directed and channeled my thoughts from the beginning to the end of this journey, the intellectual roots of this work firmly stand on the shoulders of three giants.

Dr. Cheikh Anta Diop, <<http://www.journalofafricancivilizations.com/product/GATPE-001>>, stimulated much of the thinking and energy powering of my lifelong research.

Dr. Thomas Brylawski, <<http://www.math.unc.edu/Faculty/thb/>>, my advisor during my tenure at UNC Department of Mathematics at Chapel Hill, definitely channeled my focus on the language of abstract thinking and the study of patterns.

Dr. Lionel March, <<http://dma.ucla.edu/people/faculty.php?ID=16>>, whom I met in May 2001 during the Symposium on Space Syntax at Georgia Tech in Atlanta, provided me with an early impetus of the subject matter at the inception of this research.

I would like to thank the members of my advisory committee, who constitute the human backbone of this dissertation.

Prof. Charles Eastman <<http://dcom.arch.gatech.edu/chuck/>> and Dr. Athanassios Economou <<http://www.coa.gatech.edu/~economou/>>, whose conjugated efforts patiently guided me through the steps leading to the concretization of this dissertation. Needless to say, the former initiated me to the subtleties of Design Computing, and the latter brought me to consciousness about the step by step buildup of an entire doctoral thesis. I highly appreciated Thanos' fine balance between giving me the freedom to pursue what fired me up and reining in my imagination when he got the better of me.

Dr. John Peponis, <<http://www.coa.gatech.edu/homepages/jpeponis/>> demonstrated his support early on, and provided me with nice feedback and invaluable insights.

Dr. Ellen Yi-Luen Do, <<http://www.cc.gatech.edu/~ellendo/>>, gave me guidance and counsel. I would like to specially thank her for having faith and confidence in me.

I thank the support of our institution, the College of Architecture of the Georgia Institute of Technology, and especially the Imagine Lab and its director Dr. Tolek Lesniewski <<http://www.coa.gatech.edu/imagine/>>, who, during the several years in which this endeavor lasted, provided me with moral support and useful assistance in digital visualization.

I am indebted to my parents and family for inculcating in me the dedication and discipline to do whatever I undertake well.

Most important, to Dr. Rebecca Din <<http://lib.bioinfo.pl/auth:Din-Dzietham,R>> and our children, James, Dora and Emma, who unconditionally stood by me during this journey.
